Assurance Report on the Sustainability Report

To the Annual General Meeting of Fingrid Oyj

We have performed a limited assurance engagement on the group sustainability report of Fingrid Oyj (business identity code 1072894-3) that is referred to in Chapter 7 of the Accounting Act and that is included in the report of the Board of Directors for the financial year 1.1.–31.12.2025.

Opinion

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us to believe that the group sustainability report does not comply, in all material respects, with

- 1) the requirements laid down in Chapter 7 of the Accounting Act and the sustainability reporting standards (ESRS), and
- 2) the requirements laid down in Article 8 of the Regulation (EU) 2020/852 of the European Parliament and of the Council on the establishment of a framework to facilitate sustainable investment, and amending Regulation (EU) 2019/2088 (EU Taxonomy).

Point 1 above also contains the process in which Fingrid Oyj has identified the information for reporting in accordance with the sustainability reporting standards (double materiality assessment).

Our opinion does not cover the tagging of the group sustainability report with digital XBRL sustainability tags in accordance with Chapter 7, Section 22, Subsection 1(2), of the Accounting Act, because sustainability reporting companies have not had the possibility to comply with that requirement in the absence of requirements for the tagging of sustainability information in the ESEF regulation or other European Union legislation.

Basis for Opinion

We performed the assurance of the group sustainability report as a limited assurance engagement in compliance with good assurance practice in Finland and with the International Standard on Assurance Engagements (ISAE) 3000 (Revised) *Assurance Engagements Other than Audits or Reviews of Historical Financial Information*.

Our responsibilities under this standard are further described in the *Responsibilities of the Authorized Group Sustainability Auditor* section of our report.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Authorized Group Sustainability Auditor's Independence and Quality Management

We are independent of the parent company and of the group companies in accordance with the ethical requirements that are applicable in Finland and are relevant to our engagement, and we have fulfilled our other ethical responsibilities in accordance with these requirements.

The authorized group sustainability auditor applies International Standard on Quality Management ISQM 1, which requires the authorized sustainability audit firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Responsibilities of the Board of Directors and the Managing Director

The Board of Directors and the Managing Director of Fingrid Oyj are responsible for:

- the group sustainability report and for its preparation and presentation in accordance with the provisions of Chapter 7 of the Accounting Act, including the process that has been defined in the sustainability reporting standards and in which the information for reporting in accordance with the sustainability reporting standards has been identified,
- the compliance of the group sustainability report with the requirements laid down in Article 8 of the Regulation (EU) 2020/852 of the European Parliament and of the Council on the establishment of a framework to facilitate sustainable investment, and amending Regulation (EU) 2019/2088, and for
- such internal control as the Board of Directors and the Managing Director determine is necessary to enable the preparation of a group sustainability report that is free from material misstatement, whether due to fraud or error.

Inherent Limitations in the Preparation of a Sustainability Report

Preparing a group sustainability report requires a company to make materiality assessment to identify relevant matters to report. This includes significant management judgement and choices. It is also characteristic to the sustainability reporting that reporting of this kind of information includes estimates and assumptions as well as measurement and estimation uncertainty.

The determination of greenhouse gases is subject to inherent uncertainty due to the incomplete scientific data used to determine the emission factors and the numerical values needed to combine emissions of different gases.

When reporting forward-looking information in accordance with ESRS standards, a company's management is required to make assumptions about possible future events, and to disclose the company's possible future actions in relation to those events, as well as to prepare the forward-looking information based on these assumptions. Actual results are likely to differ because forecasted events often do not occur as expected.

Responsibilities of the Authorized Group Sustainability Auditor

Our responsibility is to perform an assurance engagement to obtain limited assurance about whether the group sustainability report is free from material misstatement, whether due to fraud or error, and to issue a limited assurance report that includes our opinion. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the decisions of users taken on the basis of the group sustainability report.

Compliance with the International Standard on Assurance Engagements (ISAE) 3000 (Revised) requires that we exercise professional judgment and maintain professional scepticism throughout the engagement. We also:

- Identify and assess the risks of material misstatement of the group sustainability report, whether due to fraud or error, and obtain an understanding of internal control relevant to the engagement in order to design assurance procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the parent company's or the group's internal control.
- Design and perform assurance procedures responsive to those risks to obtain evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

Description of the Procedures That Have Been Performed

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. The nature, timing and extent of assurance

procedures selected depend on professional judgment, including the assessment of risks of material misstatement, whether due to fraud or error. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

Our procedures included, among others, the following:

- We interviewed the company's management and persons responsible for collecting and preparing the information contained in the group sustainability report.
- Regarding the double materiality assessment process, we assessed the implementation of the process carried out by the company and the information disclosed on the process in relation to the requirements of the ESRS standards.
- Through interviews we gained understanding of the company's key processes and information systems related to collecting and consolidating the sustainability information.
- We got acquainted with the company's internal guidelines and operating principles relevant to the sustainability information disclosed in the group sustainability report.
- We got acquainted with the background documentation and documents prepared by the company, as applicable, and assessed whether they support the information included in the group sustainability report.
- In relation to the EU taxonomy information, we gained understanding about the process by which the company has defined taxonomy eligible and taxonomy aligned activities, and assessed the regulatory compliance of the information provided.
- We assessed the information disclosed on material sustainability matters in the group sustainability report in relation to the requirements of the ESRS standards.
