Change proposals to the structure of main grid fees, part 2 - Grid service fees that better reflect costs

We kindly ask you to provide well-argued answers to the questions below. You may also submit other feedback. All responses will be handled confidentially. We will publish an anonymized summary of the feedback received.

Please submit your responses by February 1, 2026, by email to palautteet@fingrid.fi with the subject "Comments on change proposals to the main grid tariff structure." For more information, contact Laura Ihamäki (laura.ihamaki@fingrid.fi).

1) Do you consider the proposed new tariff bases to be appropriate as a whole? If not, why?

2) General feedback on the change proposals:

- a. Transition of main grid service billing from hourly to 15-minute intervals
- b. More power-based tariffing and weighting of the billing interface at the main grid connection point
- c. Regional loss fees replacing main grid input and output fees
- d. Voltage-specific pricing
- e. Introduction of a new system service fee

3) What should be considered in the more detailed design of changes to the tariff components?

- a. Appendix 1 (only in Finnish) presents different models for power-based fee for consumption. Which do you recommend and why?
- b. If a power-based fee for consumption is to be introduced, should the current time-differentiated energy-based consumption fee be retained alongside it, or should the power-based fee be time-differentiated to incentivize electricity consumption shifting, for example, to night-time hours?
- c. Other feedback.

4) What would be a realistic schedule for the changes? What should be considered in their implementation? What kind of transition periods are needed?

5) Would you like to be contacted to arrange a bilateral discussion on the matter in early 2026 (January–March)?
